AR-DRG generation, analysis and validation tool

TurboBatchGrouper is the new tool to generate, analyse, compare and validate millions of AR-DRG records in seconds

- **Generate AR-DRGs quickly**

- **Re-group episodes and accurately compare previously calculated DRG values for all AR-DRG* versions and ICD-10-AM/ACHI editions**

- **Determine best match AR-DRG version and ICD-10-AM/ACHI edition for episodes with unknown AR-DRG version or ICD-10-AM edition**

- **Classify and assess a single record or to a very large number of records**

Tested and accepted to verify the correct AR-DRG is assigned to patient coded records by the Independent Hospital Pricing Authority (IHPA).

TurboBatch Grouper™

BatchTG20201015

TurboBatchGrouper – a new benchmark in AR-DRG batch processing

TurboBatchGrouper is the entirely NEW, fast batch processing tool. Operating as a console tool, it performs high-speed AR-DRG* batch grouping of patient episodes using ICD-10-AM/ACHI (First to Eleventh Edition).

TurboBatchGrouper uses the same grouper engine as *TurboGrouper* – built on the EIS award winning eComPress technology.

Speed

TurboBatchGrouper is *FAST*.

Faster than any batch grouper you may have used previously. A million records requires only seconds to process. The days of having to run batch grouping overnight is a thing of the past.

Data assessment can be applied to a single record or to a very large number of records with fast output.

Summary Information

A summary of processing results for each requested combination of AR-DRG version and ICD-10-AM/ACHI edition is provided in a format suitable for automated interpretation.

Explore and compare

You can now perform exploratory processing of records with your choice of AR-DRG version and/or code edition.

Re-group previously grouped episodes to identify discrepancies.

Determine best match AR-DRG version and ICD-10-AM/ACHI edition for episodes.

Cost effective

TurboBatchGrouper is affordably priced with an annual user-based subscription including updates. Licence fees are quickly recouped through fast high volume grouping and correct AR-DRG assignment.

*AR-DRG versions 4.2, 5.0, 5.1, 5.2, 6.0, 6.x, 7.0, 8.0, 9.0, 10.0

Call to arrange a demonstration so you can discover how the FAST TurboBatchGrouper can improve your AR-DRG generation, analysis and validation, saving time and money.

TurboBatchGrouper is developed by the designers and makers of the award-winning eComPress technology. TurboCoder and TurboGrouper with TurboCoder give you powerful search, coding, and grouping functionality in single, easy-to-use platforms.
